Amman Rotana Hotel

STRUCTURAL / DEVELOPMENT AND CONSTRUCTION

Amman Jordan

Rotana's 5 star hotels comprising of 427 keys accommodated in 50 floors of the hotel tower at 188 m high.

In addition to the fundamentals of any 5 star hotel an exquisite ballroom and administration offices with 'back of house' facilities, technical service facilities as well as parking for cars allocated in 7 basement floors.

ADG provided value engineering replacing the original design of diaphragm walls with a uniform layout of cast insitu piles in the tower zone

ADG provided a value engineering exercise for the foundations; replacing the original design of diaphragm walls with a uniform layout of cast insitu piles in the tower zone and raft foundation in the podium area to be the first job that has mixed foundations system in this region. Value engineering the foundations saved the client about 8 million US\$.

This project is due for completion in 2013.
