Katherine East Trunk Infrastructure

CIVIL & ENVIRONMENTAL / GOVERNMENT

Katherine East, Northern Territory, Australia

To facilitate the expansion of Katherine East the design of additional trunk infrastructure was required.

ADG was engaged to design a trunk sewer main from the existing pump station within Katherine East. The design included trust boring beneath the Stuart Highway and gaining property access to facilitate the alignment.

The water main design consisted of two components and upgrade of an existing water main along the Stuart Highway Road Reserve and the design of a new trunk main.

ADG's proactive approach in engaging with stakeholders saw the successful delivery of the trunk infrastructure design.
